

WareCore Client Ready Reckoner

Overview

This is a quick reference for WareCore operations. It explains each main option, the activity it performs, and real examples for common workflows.

Main Modules and Activities

1. Bill Entry

- Purpose: Record inbound purchase bills and add stock to the system.
- What it does:
- Captures supplier invoices and purchase details.
- Adds purchased material to inventory.
- Creates inbound stock entries for auditing.
- Examples:
- Record a purchase bill for 10 MT of steel coil from Supplier X.
- Capture item details: company, warehouse, material, size, quantity, rate, and notes.

2. Inventory

- Purpose: View live stock levels across companies, warehouses, materials, and sizes.
- What it does:
- Shows current available quantity for every material.
- Helps verify stock before dispatch, transfer, or job work.
- Examples:
- Check how much material remains at Warehouse A.
- Confirm available stock before creating a dispatch order.

3. Movements

- Purpose: See the full stock ledger and transaction history.
- What it does:
- Shows all stock changes over time.
- Includes inbound, outbound, transfers, job work, and returns.
- Examples:
- Review stock movements for the last 30 days.
- Audit a `Transfer Out` and corresponding `Transfer In` transaction.

4. Transfers

- Purpose: Move material internally between companies or warehouses.
- What it does:
- Creates an internal stock movement record.
- Transfers stock without customer delivery.
- Examples:
- Move 5 MT from Company A Warehouse 1 to Company B Warehouse 2.
- Relocate material between two internal warehouses for production.

5. Job Work

- Purpose: Send material to an external vendor for processing and track its return.
- What it does:
- Records material leaving for processing (slitting, shearing, etc.).
- Tracks expected return date and return status.
- Helps update inventory when processed material comes back.
- Examples:
- Send 2 coils to a vendor for slitting with an expected return in 7 days.
- Record the job work order with vendor name, work description, dispatch date, and return deadline.
- When to use it:
- Use Job Work when material is not sold; it is sent away for processing and will return.

6. Dispatch

- Purpose: Manage customer deliveries and outbound shipments.
- What it does:
- Creates dispatch orders for sales deliveries.
- Captures vehicle number, driver, invoice, and dispatch details.
- Deducts stock from the warehouse when goods leave.
- Examples:
- Dispatch material to Customer Y on a specific delivery date.
- Record driver name, vehicle number, and invoice number for the shipment.

7. Reports

- Purpose: Generate summary insights and business analytics.
- What it does:
- Provides reports on stock, transfers, dispatches, and job work.
- Helps monitor operational performance and pending work.
- Examples:
- View total pending transfers and active job work orders.
- Analyze stock movement trends by month.

8. Admin

- Purpose: Manage master data and user access.
- What it does:
- Maintains companies, warehouses, suppliers, customers, materials, and sizes.

- Manages system roles and user permissions.
- Examples:
- Add a new warehouse or customer profile.
- Assign permissions to `warehouse\_manager`, `sales\_manager`, or `billing\_staff`.

Quick Usage Guide

- If material is moving inside your organization: use ****Transfers****.
- If material is sent outside for processing and will return: use ****Job Work****.
- If material is leaving for a customer sale: use ****Dispatch****.
- If you need to check stock before any activity: use ****Inventory****.
- If you need to trace what happened to stock: use ****Movements****.
- If you are recording purchases: use ****Bill Entry****.
- If you need to manage master records or users: use ****Admin****.

Examples by Scenario

Scenario A: Internal warehouse relocation

- Module: Transfers
- Example activity: Move stock from Warehouse 1 to Warehouse 2 for internal use.

Scenario B: Vendor processing

- Module: Job Work
- Example activity: Send raw material to a vendor for shearing and track the expected return.

Scenario C: Sales shipment

- Module: Dispatch
- Example activity: Dispatch finished product to a customer with vehicle and driver details.

Scenario D: Stock audit

- Module: Movements / Inventory
- Example activity: Review the complete stock ledger and verify current inventory levels.

Key distinction: Job Work vs Transfer

- Job Work: external processing work. Material is sent out and expected to come back.

- Transfer: internal stock movement. Material stays within the company network.

Roles and access

- `admin`: full access to master data and operational modules.
- `company\_manager`: oversight of company operations and internal stock.
- `warehouse\_manager`: warehouse-level stock control and transfers.
- `sales\_manager`: dispatch and customer delivery management.
- `billing\_staff`: bill entry and billing-related workflows.

Notes for users

- Always verify inventory before creating dispatch or transfer orders.
- Use `Job Work` only for processing jobs that return to stock.
- Use `Dispatch` only for customer sales deliveries.
- Use `Transfers` for internal operational stock movement.
- Use `Movements` as your audit trail for every stock transaction.
